Hello Team

I'm a client-facing Software Engineer with over 1.5 years of experience and I'd love to join and learn about you growing engineering team.

I hold a Second Class Honours (Upper Division) degree with a GPA of 3.78 in an engineering discipline, which has provided me with a strong foundation in both theoretical and applied sciences. My academic background includes coursework in Engineering Mathematics, Process Design, Computer Programming, Food Preservation and Processing, Engineering Drawing, and Machine Design.

And now I'm excited to continue my journey by contributing and growing at Emerson. These are three things that make me a perfect fit for this position.

Over the past two years, I have worked with startups tackling challenges in the transport, marketing and sales sectors. During this time, I built and maintained various web applications—including a CRM platform (TapDesk) and a full-stack ride-sharing application. I also collaborated with a cross-functional team to redesign and rebuild Easy Drive (06Alliance), a full-stack car rental platform for a U.S.-based company. In addition to startup experience, I've worked as a freelancer, delivering tailored solutions for clients ranging from automated translation tools to cost-saving web applications that directly supported their business goals. This has helped me build and maintain long-term relationships, often leading to follow-up projects and ongoing collaboration.

Throughout my work with startups and freelance clients, I've consistently demonstrated a strong curiosity and commitment to learning. I actively seek to understand how systems work at a fundamental level, which has driven me to ask insightful questions, adopt best practices, and continually expand my skill set. This eagerness to grow has not only improved the quality of my work but has also helped me stay adaptable in fast-paced, evolving environment

I have consistently demonstrated strong presentation skills in both academic and professional settings. During my undergraduate studies, I led the presentation efforts for our final year project—developing clear, well-structured slides and delivering a compelling presentation that earned positive feedback and valuable marks for our team. In my role as a software engineer at a technology startup, I also wrote detailed technical reports and maintained thorough documentation for my code contributions, ensuring that both technical and non-technical stakeholders could easily understand the solutions I developed.

I'm particularly drawn to your company's bold emphasis on encouraging employees to think big, ask hard questions, and challenge conventional thinking without fear of failure. This resonates deeply with me, as I've always approached work with curiosity and a desire to understand things at a fundamental level. I thrive in environments that promote continuous learning and open dialogue, and I see this role as an opportunity not just to contribute, but to grow. I'm excited by the prospect of working alongside like-minded individuals, where I can further develop my skills, learn from others.

I think you'll find that my experience is a really good fit for Emerson and specifically this position. I'm ready to take my skills to the next level with your team and look forward to hearing back.

Thanks,

Abdulsamad.
